Team 36

Title: Simplease

Team Members:

Abhi Gupta	gupta257@purdue.edu
Jordan Stoddard	jstoddar@purdue.edu
Matthew Fouts	foutsm@purdue.edu
Nikitha Jagadish	njagadis@purdue.edu
Rohan Rao	rao46@purdue.edu
Rizwanulla Mohammed	rmohamme@purdue.edu

Problem Statement:

Have you ever had trouble finding an apartment you liked? Are you a renter trying to advertise your availability? Do you want an easy way to pay rent, get maintenance requests, and handle other issues? Currently, these issues need to be resolved in person, causing a hassle for both tenant and renter. Our goal is to create an app that allows you to accomplish any of those goals with ease.

Project Objectives:

- Provide potential tenants a way to find apartments easily
- Provide potential tenants a preview of the apartments they are looking at
- Provide renters a way to list and show off the apartments they are offering
- Provide renters a unified system allowing tenants to pay rent and make maintenance requests

Stakeholders:

- Software Developers
 - Our team will be the software developers for this project.
- Development Managers
 - The TA our team reports to for this project.
- Project Owners
 - This will also be our team for this project.
- Clients
 - Tenants who are looking for an apartment to rent
 - Property owners who want to advertise their available apartments
 - Property owners who want to simplify their rent and maintenance system

Project Deliverables:

- A functional application that allows for easy use but still provides a robust user interface
- A server backend for hosting apartment listings and facilitating tenant requests
- A client (phone app) that allows both the renter and the tenants to interact with the server
